

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- D
1. (Currently amended) Process for the manufacture of a screen print reflection transfer, comprising the steps:
providing an adhesive-repellant base medium (1);
imprinting the base medium (1) with a transfer adhesive (2);
printing a reflection ink (3), ~~whereby~~ wherein the reflection ink comprises ~~being used is~~
~~containing~~ a plurality of reflection particles; and
drying the transfer.
 2. (Original) Process according to claim 1, characterized in that, before printing the reflection ink (3), an intermediate ink layer (8) is imprinted in an additional step onto the imprinted transfer adhesive agent (2).
 3. (Original) Process according to claim 1, characterized in that the transfer adhesive (2) is dried after imprinting the base medium (1) and before printing of at least one of the reflection ink (3) and an intermediate ink layer (8).
 4. (Original) Process according to claim 2, characterized in that the intermediate ink layer (8) is dried before printing the reflection ink (3).
 5. (Currently amended) Process for the manufacture of a screen print reflection transfer, comprising the steps:
providing an adhesive-repellant base medium (1);
imprinting the base medium (1) with a transfer adhesive/reflection ink mixture, whereby
the mixture contains a plurality of reflection particles, or imprinting the base medium (1) with a transfer adhesive which contains a plurality of reflection particles; and
drying the transfer.
 6. (Original) Process according to any one of claims 1 or 5, characterized in that a transfer medium (5) is additionally applied to the dried and hardened transfer.

- D!*
(concluded)
7. (Original) Process according to any one of claims 1 or 5, characterized in that the transfer adhesive is transparent, colored translucent, or full-colored, and in particular that it is full-color white.
 8. (Original) Process according to any one of claims 1 or 5, characterized in that reflection particles (4) are used which are essentially spherical in shape and which have a grain diameter in the range from 10 to 100 μm , preferably 25 to 40 μm , or which essentially have the form of chips or needles and a longitudinal extension in the range from 10 to 110 μm , preferably 40 to 80 μm , or a mixture thereof.
 9. (Original) Process according to any one of claims 1 or 5, characterized in that the transfer layers are printed onto the base medium in such a way that the motif represented is of the correct side in the plan view.
